

## Upload Prior Inputs when Repeating an Assessment

As you know, Denplan recommends that DEPPA assessments are completed every two years or every year if a patient is high risk for perio or caries. This is because risk changes over time.

This new update allows you to upload the inputs from the previous assessment that you conducted on your patient to save clinical time. Then all you need to do is to review the inputs and make changes as necessary.

There are two ways you can access this function. Firstly, on the patient page for a patient who has been previously assessed, you will see a new arrow. Clicking on this will upload the inputs from the last DEPPA assessment completed. If you click on Clinician Assessment, then you will start the assessment from scratch as before. Similarly, if you select the Patient Initiated Assessment, this will not be pre-populated.

The second way is if the patient has completed the Patient Initiated Assessment. If you click on Exam date, then as usual this will take you to the Clinical Assessment without uploading the inputs from a prior assessment. If you click on the date in the second, highlighted, column then your clinical inputs will be prepopulated.

Exam Date	Recall Clinical Inputs From	Patient Name	Age	Action
19/05/2020	16/07/2019	Lisa James	30	Delete
20/05/2020	21/08/2018	Jo Jones	19	Delete
21/05/2020	23/04/2014	Liz Smith		Delete

If you choose to upload the inputs from the previous assessment, then a message appears on the top of the Clinician Assessment screen explaining where these inputs have come from. If you clicked the arrow unintentionally, simply go back to the previous screen

Inputs recalled from an assessment completed on 08/11/2017.

Exam Date: 21/05/2020

**Patient Questions**

Are you experiencing any pain or discomfort in your mouth?

Yes  Some  No

Do your teeth allow you to eat an unrestricted diet?

Yes  Mainly  No

Remember that you now have the option to complete the questions for the New Perio Classification questions whereas this may not have been present in your prior assessment

Stage and Grade per 2017 Classification ?

Extent of bone loss

Molar-incisor pattern     <30% of teeth     ≥30% of teeth

Extent of bleeding on probing (BOP)

<10%     10-30%     ≥30%

Percentage interproximal bone loss at worst site

%

Is there bleeding at a PPD 4mm site?

Yes     No

If after reviewing the inputs, you decide that there are no changes, there will be a pop up to confirm that this is correct

apps.previsertest.com says

You have not changed any of the recalled inputs. If this is correct, please select OK to submit the assessment.

  

Once the assessment is submitted, you will see your report now has a 3<sup>rd</sup> page which shows what elements of risk and health have changed since the last DEPPA assessment
